Work Experience - own companies:

Company:	Platypus (own company)
Website:	http://www.platypusweb.com.br/
Location:	São Paulo - Brazil
Working Time:	March 2013 to present
Function:	self-employed
About:	Platypus is my own company for developing freelance projects for some clients who already know my work
Activities:	**Development of JavaScript applications:** - Angular (since 1.3 until the latest version) - Ionic - Typescript - NodeJS **Development of PHP websites:** - MVC websites built with PHP, with strong usage of LAMP and Docker configuration - Strong JavaScript capabilities and libraries such as jQuery and Angular. - Layout development using HTML5, CSS, SCSS and libraries such as Bootstrap or Tailwind **Development of Mobile Applications:** - Ionic and Cordova applications - Flutter development - Android applications using VLCLib and MPEG2 movie broadcast **Development of Java projects:** I worked on different Java projects, especially one as part of a strong team that developed a whole e-commerce business integrating with already-existing systems and databases from Editora Globo, a huge magazine company in Brazil. Other projects included a bar-administrator system, integrated with a pre-existing MySQL database, built from legacy code, that required me to work by myself.

Company:	Botecaria (own company)
Website:	http://www.botecaria.com.br/
Location:	São Paulo - Brazil
Working Time:	January 2013 to January 2025
Function:	Co-owner
About:	Botecaria was a beer distribution company in Brazil. Although not computer-related, I had the hard work of starting a company from scratch, learning a lot about management, the economy, project building, taxes, hiring, and everything else that is necessary for raising a startup.
Activities:	All infrastructure and technical dependencies of the company. Management and employee hiring. Raising a startup

Work Experience - other companies:

Company:	BairesDev
Website:	https://www.bairesdev.com
Location:	Fully remote
Working Time:	September 2020 to April 2023
Function:	Full Stack Developer
About:	BairesDev delivery teams help companies develop custom software without hiring permanent software development staff.
Activities:	Development of WordPress plugins and integrations with PHP. Creating APIs in NodeJS and PHP with documentation for the projects using tools such as swagger.io Working on existing Angular projects, implementing new functionalities

Company:	Alpar
Website:	http://alpar.com.br/
Location:	São Paulo - Brazil
Working Time:	November 2018 to August 2020
Function:	Full Stack Developer
About:	Alpar is a consulting firm and software house that works with big companies, providing high-end solutions.
Activities:	Full stack developer, mainly working with Smiles S.A., a Brazilian company that manages a loyalty program frequent-flyer program. I was also in charge of two ionic projects that generated private mobile applications, working on them from beginning to end.

Company:	Savedo
Website:	https://www.savedo.de/
Location:	Berlin - Germany
Working Time:	August 2015 to January 2018
Function:	Front End Developer
About:	Savedo was one fintech startup, part of Finleap/Hitfox Group. It provided investment products for Germans to invest in other banks throughout Europe. I was hired when the company was in its first year and it was amazing to see the company grow and help them in it.
Activities:	Development of a full front-end application to interact with a back-end API. The application was built with Angular 1.0 and Ionic built over TypeScript, using modern patterns and technologies. Architecture of APIs and microservices to provide data for the application. Ruby on Rails development of the back-end and marketing website

Company:	Element Wave
Website:	http://www.elementwave.com/
Location:	Galway - Ireland
Working Time:	January 2015 to August 2015
Function:	Software Developer
About:	Element Wave was an SDK and API for mobile applications that allowed programmers and companies to trace their apps, getting information such as time of usage, locations, custom events, and - especially - sending push notifications for the users. At the time I started working there, it was a company with only 7 employees. As a potential start-up with a great idea, the job was challenging and fun.
Activities:	Backend JavaScript development with NodeJS. Frontend JavaScript development with AngularJS. Database communication with Couchbase and ElasticSearch.

Company:	Aprimo - Teradata
Website:	http://www.aprimo.com/
Location:	London - UK
Working Time:	November 2011 to September 2012
Function:	Technical Consultant
About:	Aprimo is an Integrated Marketing Management Software, customizable, with different modules to manage branding campaigns and centralise marketing assets in a library that's accessible through a web portal.
Activities:	Customer Support Developing customisations for companies Experience working with Aprimo proprietary API Development in .NET C# Use of MSSQL database

Company:	Easypay
Website:	http://www.easypay.pt/
Location:	Lisbon - Portugal
Working Time:	March 2011 to September 2011
Function:	Developer and Technical Consultant
About:	Easypay is a company that offers an API for online payments.
Activities:	Customer Support Communication with clients who were implementing our solution Development of simple systems using PHP and MySQL, integrating them with the API of EasyPay

Company:	LabOne Systems S/A
Website:	http://www.labone.net
Location:	São Paulo - Brazil
Working Time:	October 2008 to January 2011
Function:	Developer and Project Manager
About:	LabOne is a software company focused on digital media applications. The company was the developer of Sonora, the biggest music website in Latin America at the time I worked there.
Activities:	Project development using such technologies as C#, JavaScript, .NET, Java, MonoTouch Extensive experience modelling relational databases and object-oriented systems Experience in JavaScript using jQuery libraries Experience with Google Maps API Experience as a project and team leader Development of mobile applications using Apple SDK, Objective-C, and Monotouch.

Company:	EWTI - Engenharia de Web
Website:	http://www.ewti.com.br
Location:	São Paulo - Brazil
Working Time:	April 2006 - September 2008
Function:	Software Developer
About:	EWTI was a small software company located in the centre of São Paulo City. In spite of its size (about 15 employees), the clients were always big companies that had found at EWTI good solutions for their problems.
Activities:	Project development using such technologies as PHP, ASP, .NET, and Java Extensive experience modelling relational databases and object-oriented systems Extensive experience in database management using MSSQL, Oracle, and, especially, MySQL
