# PAULO HENRIQUE MARTINS

## SENIOR FULL-STACK ENGINEER

São Paulo, Brazil | Phone: +55 11 945512529 | Dual Citizenship: Brazilian / Portuguese
Email: paulohenrique@paulovelho.com | Portfolio & CV: platypusweb.com.br/cv/paulo/

## PROFESSIONAL SUMMARY

Versatile Senior Full-Stack Engineer with nearly 20 years of experience architecting, building, and scaling high-availability web systems, microservices, and mobile platforms. Deep technical expertise in JavaScript/TypeScript ecosystems (Node.js, Angular, React), paired with robust multi-language backend engineering in PHP and Java. Proven track record leading software architectures for global enterprises, fintech portals, and high-traffic e-commerce ecosystems. Experienced operating in distributed global engineering teams across Europe and Latin America.

## TECHNICAL SKILLS

| | |
|---|---|
| **Languages:** | TypeScript, JavaScript, Node.js, PHP, Java, Dart, SQL, C# (.NET) |
| **Front-End:** | Angular (Modern), React, Tailwind CSS, HTML5, CSS3, SCSS, Bootstrap |
| **Back-End & APIs:** | Node.js, RESTful APIs, Microservices, Ruby on Rails, PHP MVC Frameworks, Swagger |
| **Mobile:** | Flutter, Ionic |
| **Databases & Infra:** | MySQL, MSSQL, PostgreSQL, Oracle, Couchbase, ElasticSearch, Docker, Git, CI/CD Pipelines |

## LANGUAGES

**English:** Fluent | **Portuguese:** Native | **Spanish:** Fluent | **German:** Intermediate

## PROFESSIONAL EXPERIENCE

**Senior Technical Consultant & Architect — Platypus (Software Consultancy)** *São Paulo, Brazil | Mar 2013 – Present*

- Architect and deliver custom end-to-end full-stack applications for global enterprise clients, specializing in Angular, TypeScript, and modern responsive front-end architectures.
- Deploy containerized backend API microservices utilizing Docker, Node.js, and PHP, ensuring high uptime and secure data integration.
- Partnered with enterprise engineering groups at Editora Globo to design high-volume transactional sub-systems for major e-commerce platforms.
- Engineer cross-platform, natively compiled mobile solutions using Flutter and Ionic, managing complete cycles through store release.

**Co-Founder & Lead Systems Architect — Botecaria** *São Paulo, Brazil | Jan 2013 – Jan 2025*

- Designed, configured, and maintained custom logistics management software and local server infrastructure for a regional distribution network.
- Built automated operational workflows, inventory tools, and tracking systems that enabled scaling the business over a 12-year period.

**Full-Stack Engineer — BairesDev** *Remote | Sep 2020 – Apr 2023*

- Integrated into distributed Agile teams to construct, test, and maintain enterprise software features for international client bases.
- Architected and extended core front-end single-page application modules built on Angular and TypeScript.
- Designed microservice REST API endpoints with Node.js and PHP, maintaining full OpenAPI specifications via Swagger.

**Full-Stack Engineer — Alpar Service** *São Paulo, Brazil | Nov 2018 – Aug 2020*

- Served as core software engineer for Smiles S.A., maintaining and shipping high-performance features for a high-traffic frequent-flyer digital platform.
- Spearheaded two hybrid mobile application initiatives with Ionic, managing technical architecture and production deployments.

**Frontend / Full-Stack Engineer — Savedo (Finleap / Hitfox Group)** *Berlin, Germany | Aug 2015 – Jan 2018*

- Engineered high-security financial tracking portals for a leading European fintech marketplace.
- Architected single-page application front-ends with Angular, TypeScript, and Ionic, securely piping transactional data to backend services.
- Built modular UI components integrated into Ruby on Rails backends.

## EARLY CAREER HIGHLIGHTS (2006 – 2015)

**Software Developer — Element Wave** *Galway, Ireland | Jan 2015 – Aug 2015*

- Built high-velocity push-telemetry analytics event-tracking backends with Node.js, Couchbase, and ElasticSearch.

**Technical Consultant — Aprimo (Teradata) & Easypay** *UK / Portugal | 2011 – 2012*

- Developed custom payment gateway APIs (PHP/MySQL) and enterprise software integrations (.NET C#/MSSQL).

**Full-Stack Developer — LabOne Systems & EWTI** *São Paulo, Brazil | 2006 – 2011*

- Engineered software for Sonora (Latin America's largest music network at the time) using C#, .NET, Java, and SQL optimization.

## KEY PROJECTS

**MagratheaPHP** | PHP Framework & Developer Tooling *platypusweb.com.br/magratheaphp2/website/*

- Engineered a high-performance open-source PHP framework optimized for rapid API delivery.
- Built an internal routing engine achieving 1,382+ req/sec throughput at 0.72ms CPU latency with a 0.3MB memory footprint.
- Developed an ORM engine, automated email queues, and an interactive admin terminal for database-to-model code generation.

**guia.lol** | Artist Platform & Event Aggregator *guia.lol*

- Built a web application providing digital business cards and show schedule management for creators.
- Integrated Google OAuth for passwordless authentication and web scraping pipelines (Sympla/Eventim) for automated event metadata imports.

## EDUCATION

**Bachelor of Computer Science** — Mackenzie University, São Paulo, Brazil (Graduated: Dec 2007)
